How to setup git for Ubuntu

To use Git on the command line, you will need to download, install and configure Git on your computer!

First download and install the latest version of Git:
https://git-scm.com/downloads

Then Install Git in the command line using :
$ sudo apt install git-all
and then type 'y' when prompted.

Check Git Version
$ git --version

Setup your Git username for every Repository on your computer.
1) Open terminal
2) Set a Git username:
$ git config --global user.name "your username"
3) Confirm that you have set the Git username Correctly:
$ git config --global user.name
>your username

Set your commit email address in Git
Info: github uses your commit email address to associate commits with your account on github.com
